

LETTER OF VOLATILITY STATEMENT

To Whom It May Concern:

CostarHD, LLC confirms the following information regarding the Letter of Volatility statement for the

PART NUMBER: 3612-1023/0000 Color CCD Cameras

PART DESCRIPTION: Small DSP Controlled Machine Vision Color CCD Camera

These cameras contain a Factory Programmed 8K EEPROM (Non-volatile) Memory. To sanitize/re-program the EEPROM requires access to Sony SS-2 Control Software Package and CostarHD factory firmware files. Recommend return to Factory for sanitation/Re-Program.

In addition, the camera contains a Sony Memory Controller with built in DRAM (Volatile) Memory for storing Camera operational status. This volatile memory is accessible to the user via GUI to control Camera operation/parameters. Some of these parameters may be saved to the EEPROM. If not saved to the EEPROM, the DRAM data is lost on power down. On Power up, the Camera start-up parameters are read into the DRAM from the EEPROM.

Sincerely,

Prashant pradeep

VP of Engineering
